
Goji Berry

Lycium barbarum

Features:

- Food - berries raw cooked or dried; young leaves steamed
- Highly prized and nutritious fruit
- Takes three years for the roots to establish - we find adding sand and vermiculite to the native soil at planting time is beneficial.

Characteristics:

Size	6' tall and wide	Sun/Shade	sun
Soil	adaptable but best if slightly alkaline Well drained, sandy loam	Pollination	Self fertile
Zone	6-9	Water	regular until 4 yrs, then drought tolerant
Bloom	May	Harvest	September
Decid. /Evrgreen	Decid.
